Curriculum Vitae

Personal Information
Name: Uzumaki Sasuke
Title: Security Engineer / Cyber Defense Specialist
Phone: +84 9xx xxx xxx
Email: sasuke.uzumaki@email.com
LinkedIn: linkedin.com/in/uzumakisec
GitHub: github.com/uzumakisec
Location: Ho Chi Minh City, Vietnam

Professional Summary

Analytical and detail-oriented Security Engineer with over 5 years of hands-on experience in cyber defense, incident response, and adversary simulation. Specialized in threat hunting, malware reverse engineering, and exploit development. Proven ability to build, automate, and harden security operations infrastructure for enterprise environments. Strong knowledge of Windows internals, Linux security, and Active Directory attack surface reduction.

Core Competencies

- Incident Response & Forensics: End-to-end triage, volatile data analysis, memory forensics, network packet analysis, and log correlation.
- Threat Hunting & Detection Engineering: Developing and deploying advanced detection rules (Sigma, YARA, KQL, SPL) across SIEM and EDR platforms.
- Malware Analysis & Reverse Engineering: Static and dynamic analysis, unpacking, deobfuscation, and behavioral classification using IDA, Ghidra, and x64dbg.
- Penetration Testing & Red Teaming: Exploit development, privilege escalation, Active Directory attacks, and post-exploitation automation.
- Vulnerability Management: Prioritization and remediation workflows using CVSS scoring, Nessus, OpenVAS, and custom scanners.
- Security Architecture: Hardening Linux and Windows infrastructure, enforcing Zero Trust, and SIEM/EDR integration.
- Scripting & Automation: Python, PowerShell, and Bash for detection pipelines, data enrichment, and tooling development.
- Tools & Platforms: Splunk, ELK, Microsoft Sentinel, CrowdStrike Falcon, Wireshark, Sysmon, Velociraptor, Burp Suite, Metasploit, Volatility, Cuckoo Sandbox.

Professional Experience

Senior Security Engineer
V Corporation, Ho Chi Minh City, Vietnam
June 2021 – Present

- Designed and implemented a hybrid SIEM architecture using ELK and Microsoft Sentinel to ingest and correlate over 300K+ daily events.
- Led incident response and threat containment for targeted intrusion attempts, reducing mean-time-to-contain (MTTC) by 45%.
- Developed automated detection playbooks using Python and KQL to identify persistence mechanisms and lateral movement.
- Reverse-engineered malware samples to extract IOCs, improve SOC detection coverage, and create YARA-based signatures.
- Collaborated with infrastructure teams to implement Zero Trust network segmentation and hardening baselines.

Information Security Analyst
ZIO, Ho Chi Minh City, Vietnam
Jan 2019 – May 2021

- Conducted vulnerability assessments and remediation validation across on-premise and cloud infrastructure.
- Built incident triage dashboards that correlated EDR, firewall, and system logs for faster alert validation.
- Assisted in forensic investigations and created detailed technical reports for executive and compliance teams.
- Supported red team engagements by simulating adversary TTPs to validate blue team readiness and response efficiency.
- Trained internal staff on secure coding practices and phishing awareness, improving organizational security posture.

Education

Bachelor of Science in Information Security, Vietnam
Graduated 2018

Certifications

- GIAC Certified Incident Handler (GCIH)
- GIAC Certified Forensic Analyst (GCFA)
- GIAC Reverse Engineering Malware (GREM)
- Offensive Security Certified Professional (OSCP)
- Offensive Security Exploit Developer (OSED)
- Offensive Security Web Expert (OSWE)

Projects & Research

- Threat Hunting Framework: Built a modular hunting platform integrating Sigma and Elastic for TTP-based detection and visualization.
- Process Injection Detection Ruleset: Developed custom Sysmon configurations to detect process hollowing, APC, and thread injection.
- Exploit Development Lab: Designed and documented a private exploit lab using vulnerable VMs to test stack and heap-based exploit techniques.
- Malware Sandbox Automation: Created a Cuckoo-based sandbox pipeline integrated with Elastic for real-time malware behavioral analysis.

Languages

- English: Professional working proficiency
- Vietnamese: Native
